

**Diagnostic Ultrasound Corporation, maker of the BladderScan[®], Partners with
International Volunteers in Urology to Sponsor Traveling Resident Scholars**
University of Washington Resident to Receive DU-Sponsored Scholarship

Bothell, Wash., January 4, 2006 – Diagnostic Ultrasound Corporation (DU) is pleased to announce an agreement with International Volunteers in Urology (IVU) to sponsor two traveling resident scholars during the 2006-2007 scholarship year. IVU's Traveling Resident program provides for residents to accompany a mentoring Urologist overseas, where the team teaches urological procedures to local surgeons and physicians. The value of the Diagnostic Ultrasound donation, in financial support and medical equipment, is over \$30,000.

One of the DU-sponsored scholars will be chosen from the University of Washington Medical School and a second scholar will be chosen from the Pacific Northwest/Western region. IVU plans to announce the candidates selected in February 2006.

Diagnostic Ultrasound, in addition to the financial scholarships, will donate BladderScan[®] bladder volume instruments for the residents to gift to their destination hospitals. The BladderScan[®] is the standard of care in Urology for bladder volume measurement.

"I am extremely impressed by the fine work done through the IVU and University of Washington traveling resident programs," said Gerald McMorro, CEO, Founder and Chairman of the Board of Diagnostic Ultrasound Corporation. "These programs not only provide much needed urological care for patients, but the residents and their mentors also train local doctors so they can provide quality care for their patients in the future. We are proud to be able to help them achieve this mission."

The University of Washington resident that Diagnostic Ultrasound is sponsoring will be working in Cameroon with Dr. George Brannen, a Professor of Urology at the University of Washington. Dr. Brannen's Cameroon program, initiated in 2004, covers three hospitals and 12 rural health centers.

"The new collaboration with Diagnostic Ultrasound advances the mission of our Global Initiative Program from several perspectives," said Dr. Brannen. "The donated supplies permit sharing of resources with those who suffer physical distress. The Urology residents are trained to practice 'Resource Limited Medicine,' and these young physician scholars are given a humanitarian venue that results in sustainable material developments and that spreads good will in the global community. The momentous effect of such opportunities will reach future generations."

The second scholarship will sponsor a Western or Pacific Northwest Urology resident identified through IVU's selection process.

"IVU relies entirely on private funding to support its programs," said Alyssa McBride, Executive Director of IVU. "Diagnostic Ultrasound's sponsorship of two Resident Scholarships not only enables two residents to have an amazing educational experience, but it also provides for the care of hundreds of patients that the residents and their mentors will attend to over the

Protecting patient health, comfort, and dignity with reliable, noninvasive ultrasound instruments

years. It is only through partnerships like this one with Diagnostic Ultrasound that IVU is able to fulfill its mission of providing quality urological care in the developing world.”

While abroad, IVU residents have exposure to a wide variety of cases and may have the opportunity to participate in types of surgeries that are difficult for trainees to gain access to in the United States. Residents also learn resourcefulness, as conditions in their destination countries are often markedly different from those in the United States. IVU programs in 2005 sponsored teams to Cuba, Vietnam, Nicaragua, Mongolia, Honduras, Ghana, Peru, Cameroon, and India.

NOTE: If you are a Urology resident and are interested in applying for a Traveling Resident Scholarship, please visit the IVU Website www.ivumed.org and contact IVU directly for details on applications and due dates.

About Diagnostic Ultrasound

Diagnostic Ultrasound fills a unique niche in the ultrasound industry, specializing in handheld, application-specific ultrasound devices. The company’s mission is to advance patient care by making noninvasive ultrasound more accessible to health care providers. Founded in 1984, Diagnostic Ultrasound has grown from a small start-up into a thriving and profitable international corporation. The company is best known for its BladderScan[®] bladder volume instruments, which are clinically proven to help prevent unnecessary catheterization and reduce rates of urinary tract infection. The privately held company, with 175 employees worldwide, was recently ranked among the fastest growing technology companies in Washington State in Deloitte’s prestigious “Technology Fast 50” program. About IVU

The International Volunteers in Urology (IVU) is committed to making quality urological care available to people worldwide. In fulfilling this mission, IVU provides medical and surgical education to physicians and nurses and treatment to thousands of suffering men, women and children. Founded in 1995 by pediatric urologist Dr. Catherine deVries, IVU has conducted over 40 team workshops treating thousands of children and adults in 15 different countries. IVU has trained over 300 doctors and nurses and donated over half a million dollars worth of supplies and equipment around the world. Since 1999, IVU has awarded nearly 100 scholarships to urology residents and fellows to experience urology abroad. IVU’s motto **Teach One – Reach Many** highlights its goal to “teach the teachers,” thus ensuring the future of quality care for generations to come. Website: www.ivumed.org.
